Dear Honorable Commissioner:

REPLY TO EXAMINER'S ANSWER

Applicants believe that the Appeal Brief of December 4, 2008 stands on its own and sufficiently addresses the Examiner's rejections. However, Applicants briefly emphasize that the Examiner's rejection still completely fails to teach all of the limitations of the pending independent claims, even if all of Applicant's other arguments are ignored.

The Examiner's Answer states that the "aspect of chlorination has been addressed in the rejection" referring to the teachings of Agostinelli. However, the Examiner completely ignores the limitation of presently pending claim 77 requiring "chlorinating the glove, and thereafter, stripping the glove from the hand-shaped former without the use of an antiblocking powder, wherein the glove is inverted so that the

outer surface of the substrate body applied with the hydrogel coating is configured to face a user's hand when inserted into the hand-shaped cavity." (Emphasis added).

These limitations require the chlorination of the glove while the glove is still on the former, where the chlorinated surface (i.e., the surface applied with the hydrogel coating) forms the inner surface of the glove that contacts the user's hand.

The Office Action cites to Agostinelli for the disclosure of chlorinating a glove while it is still on the former prior to stripping. The result of the process of Agostinelli is that the powder side is the inner, donning layer of the glove, while the halogenated side is the outer surface. In fact, Agostinelli discloses that the halogenation of the glove is useful on the outer surface to reduce the affinity of the outer surface for the lubricating powder. While the Examiner admits that Agostinelli teaches chlorination of the outer surface of their glove, the Examiner states that this teaching somehow satisfies the limitations of the presently pending claims.

Applicants respectfully assert that none of the references, even if combined absent any rationale to do so, teach or even suggest the halogenation of the inner, donning surface while still on the former as required by independent claims 77 and 98. No rationale exists for one of ordinary skill in the art to completely change the configuration of Agostinelli's glove in order to provide the presently claimed glove. Applicants respectfully submit that one of ordinary skill in the art, having common sense at the time of the invention, would not have utilized the halogenating step of Agostinelli to halogenate the inner, donning layer of a glove while it is still on the former. Halogenating the inner surface of the glove disclosed by Agostinelli would effectively

destroy its intended purpose. Specifically, the lubricating powder would not stick to the inner surface of the glove, preventing its usefulness as disclosed by Agostinelli.

Again, it is Appellants' position that the Examiner's rejection of claims has been shown to be untenable and should be **reversed** by the Board.
